## Add SAP Application Data to Critical Business Documents with Ease

Many business-critical documents lose value if they can't integrate with information from your SAP applications. By using a solution that automatically incorporates SAP data with the documents you use most frequently – like business letters, invoices, and contracts – you can increase accuracy, better leverage critical data, and free up employees to focus on more strategic tasks.

### Bring SAP Data into More Documents

Aia Software's Intelligent Text Processing (ITP) software provides an easy-to-use interface for building documents with information from SAP applications without extensive programming or testing. Administrative staff and other general business employees can quickly begin working with ITP through a browser-based interface on their desktop. Their first step is to select a template from a menu of flexible "super templates" to serve as the basis for their document. They can then choose a standard "text block" – that is, a paragraph of predefined text – to quickly and consistently build contracts, letters, policies, permits, and other business correspondence, as well as application-driven documents.

**FIGURE 1** ▼ ITP creates a polished final draft, generated by combining a user-specified SAP application and a customized template

### Make Intelligent Text Processing a Routine Task

ITP's powerful document modeling applies business rules to insert conditional text and advanced formatting throughout this process. ITP's help text and wizard-like interactive dialog can assist users as they customize their documents with tailored text and corporate style.

When a user finishes setting up his document, ITP retrieves data from a user-specified SAP application, combines it with the customized document, and creates a polished final product in Microsoft Word (see **Figure 1**) or in another common word-processing environment or file format, such as PDF. To further streamline the workflow, ITP can automatically route the documents to printers, faxes, or document management systems.

Consider a typical business event, such as a request for quote. This online request can trigger ITP correspondence processes: ITP pulls appropriate predefined sections of the document and automatically assembles them with consistency and compliance. With ITP's centralized updating capability, you need only make changes to the content library once, and ITP updates all subsequent occurrences automatically.

### Scalable, Certified, Seamless Integration

By automatically linking SAP application information with vital business documents, ITP helps SAP customers:

- Spend less time on routine word-processing tasks
- Increase productivity
- Achieve shorter time to market

Certified for integration with SAP solutions, ITP runs as an iView in SAP NetWeaver Portal to seamlessly integrate with the SAP environment, making it nonintrusive and transparent to end users. ITP can be scaled to support thousands of users or just a few departments or remote employees. For more information, please visit [www.aia-ity.com](http://www.aia-ity.com). ■
