

ITP DOCUMENT PLATFORM

Messages to customers and the marketplace are some of the most critical information an organization will produce; therefore businesses need a flexible and reliable document solution. The ITP Document Platform from Aia Software is specifically designed to create, process and distribute documents.

From automatically producing large number of standard documents, to composing sophisticated individual correspondence from text building blocks or dynamically filling in digital forms, ITP gives users the ability to easily create mission-critical documents.

Because ITP derives data from your applications, you can use existing customer or business data in your documents without modification. ITP seamlessly integrates with your back and front office applications. Whenever your business processes change, you can adjust your documents quickly with minimal cost and effort.

Legal & General Life Insurance improves business efficiency and time-to-market with ITP

"Since using ITP as our document production system, we produce our documents in half of the time, which is a significant commercial advantage."
Francis Vanoni - IT Manager

National Lloyds Insurance Company increases competitiveness and efficiency with ITP

"Because of the ease of use of ITP and the short development time of new documents, we are now much more competitive and we can do more business in the U.S. insurance market."
Karl Lauritzen - Vice President en Chief Information Officer

ABOUT AIA SOFTWARE

Aia Software is the developer and worldwide supplier of ITP Software, with offices in The Netherlands, USA, Great-Britain, Germany, Switzerland and Australia. Established in The Netherlands in 1988, Aia has become a strong player in the field of creating, managing and distributing company-critical documents.

Along with extensive document experience, Aia has a thorough understanding of business processes across a variety of industries. Today, ITP is used by banks, insurers, leasing companies, lawyers and notary offices, as well as central and local government (more than 50 percent of all Dutch municipalities use ITP!). Altogether more than 800 organizations in five continents rely on ITP for seamless document processes.

ITP Document Platform

System Documents

Standard documents are automatically generated without user intervention on a transactional or batch basis. The business application decides where and when documents are generated, along with appropriate text, layout and data.

Digital Forms

Based on a scripted dialog, users fill in a form on the internet. The form is populated with data from business applications. The information collected can be sent to mid- or back office systems.

System Documents

Digital Forms

Interactive Documents

Textblock Correspondence

Interactive Documents

The automatically derived layout, application data and standard texts are completed with manual input.

Textblock Correspondence

Documents are composed step by step using pre-defined text blocks.

OUTSOURCE TO OUR DOCUMENT FACTORY

Need an alternative to devoting time and resources to internal document composition? With our Document Factory, you can outsource all or a part of the development and maintenance of your documents to us. Our experienced team will analyze, implement and test the changes needed in your documents.

Document Factory offers substantial benefits:

- The professionalism of your documents increases: you benefit from our expert knowledge and experience
- Achieve cost reduction because of our standardized, highly productive working methods
- IT costs become visible, measurable and manageable
- Clear, specific agreements about service levels and reliability eliminate concerns and the need for project supervision

Quion finds a true partner

"We searched for a solution and found a partner."
Tjeerd Rienstra - Directeur

IKB Leasing GmbH achieves cost reduction

"Because of our large number of documents, ITP is mission critical to us and therefore integrated with SAP. Thanks to ITP the time needed for producing documents is reduced by 80% and the number of templates with 70% . This results in huge cost savings in our day to day business."
Rüdiger Schulze - IT-Leiter

DOCUMENTS... HAVE THEM YOUR WAY!

ITP can meet all your document requirements:

- Correspondence, contracts, policies, statements, quotations, reports, invoices, and more – from simple standard letters to the most complex composed documents
- Automatically prepared with correct layouts and corporate identity elements
- Print, e-mail, publish or archive your document in the formats you require – PDF, HTML, XML, TIFF, Microsoft Word, OpenOffice.org or as images
- Whether integrated with your legacy business applications or with a web-based solution
- Fully automatic workflow in a batch or via an interactive interview process
- For your team or for customer self-service

ITP PRODUCT PORTFOLIO

ITP/Server is optimized for automatic production of your documents, centralized on a server. Supports high volumes of standard documents, as well as individual documents created on demand.

ITP/OnLine Server is a fully web-enabled solution for creation of individual documents to which specific information must be added. Based on pre-defined templates, local or remote users can add data or text blocks.

ITP/MDK Repository is a specifically designed environment to develop and maintain your ITP documents. It offers one central spot to define documents or text building blocks and manage these in a structured way using version management, impact analysis, and other capabilities.

THE SOLUTION FOR BUSINESS APPLICATION OUTPUT

Documents... Have Them Your Way!

SUITABLE FOR ANY IT INFRASTRUCTURE

- One scalable solution for batch, central server and web environments
- Supports all modern word processors including Microsoft Word and OpenOffice.org
- Integrates with open and proprietary data sources like iSeries, MQSeries, Oracle, DB2, ODBC, SQLServer, XML, SAP, and Web Services
- Extensive set of interfaces for easy integration with your business applications
- Interacts with multiple workflow, document and content management systems
- Document-oriented scripting language for tailored process integration
