

# ITP Workstation

ITP/Workstation is Aia Software's workstation-based solution for composing and processing individual requests of an ITP automated document to produce business documents.

Customers use ITP/Workstation to produce:

- Letters from a correspondence system
- Tailor made quotations
- Certificates
- Statements
- and other Individual documents.

ITP/Workstation composes a complete, rich, document instantly and returns it to the user for review and further editing. The layout and formatting features of the word processor of choice (Microsoft Word, OpenOffice.Org, etc) will ensure it is easier than ever to compose documents in ITP.

## Business intelligence

The ITP process forces the office worker to adhere to company standards. Company standards that dictate not only the correct template style, but the valid application of business rules and text-fragments, including the automatic incorporation of data already known to the company.

ITP/Workstation enables the back office worker to improve their individual productivity while providing the company with better overall control and quality.

## Integration with legacy systems

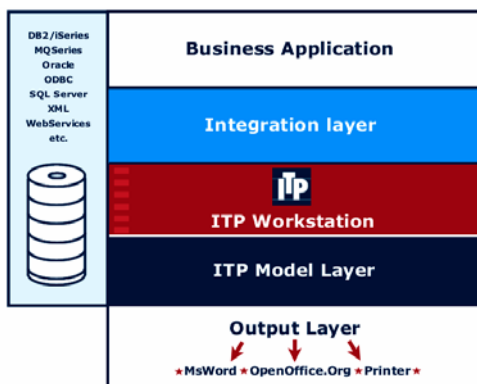

ITP/Workstation is well positioned to operate in a back office application environment. It is designed to be a component with inbound and outbound interfaces to the user application. ITP/Workstation interacts with a variety of open and proprietary standards.

## Built-in interview process

For information not available in one of the companies' databases, ITP/Workstation can be programmed to perform an interview process with the workstation user. This feature has proven to be very powerful especially in those cases where the release cycle of the application does not match the heavy day to day demand on the business documents.

## Benefits

- Seamlessly integrates into core applications
  - Superior output model authoring enables outputs of high quality and complexity, supported by most word processors
  - Interacts with a variety of open and proprietary data sources and stores on a multiple technology platforms
  - Enhances processes, achieving greater degrees of automation and significant enrichment
- High capability end-to-end output processing, covering all key functional areas in a single modular toolset

# ITP Product Portfolio

## ITP/OnLine Server: *Advanced browser-based document composition*

ITP/OnLine Server is a web-based document composition and distribution solution that supports office workers in composing complex correspondence and other business documents. With its browser-based user interface and its use of API's, it can easily integrate with any business application and use data from any database.

## ITP/Workstation: *Document composition based on PC word processors*

ITP/Workstation is used for the composition of individual, interactive documents on a workstation. Typical examples are letters from a correspondence system, customized quotations, certificates, and statements.

## ITP/Server: *Server-based document composition*

ITP/Server is a server-based solution for running ITP automated documents to compose business communication. It can be used as a controlled batch environment or as an on-demand document composition server. Typical examples are renewals of insurance policies, mass mailings, reminders, yearly statements and individual documents that are produced on demand but that do not require rich interaction.

## ITP/MDK Repository: *Model Document Library*

The ITP/MDK Repository is a client-server application that provides a complete management and development environment for ITP model documents (templates). The server provides secure multi-user access to a central database that stores documents, building blocks and ITP models. The client application offers a structured view on the objects within the database. Documents and models are organized in projects and folders. This single view provides insight into the relationships between the objects.

## ITP/SDK: *Software Development Kit*

The ITP/SDK allows for the development of ITP database descriptions. The definitions in these descriptions link the data fields in your model documents to the actual data retrieval implementations.

## About Aia Software

Aia Software is a leading worldwide provider of document solutions. Our ITP Document Platform enables your employees to compose relevant and personalized business-critical documents. Over 800 companies use ITP as one integrated solution for automatically producing large numbers of standard documents, composing sophisticated individual correspondence from text blocks or dynamically filling in digital forms. It seamlessly integrates with your business applications.
